These test results are being used to learn more about Protoporphyria and help breeders control the disease. Please identify all samples by tattoo and make sure the animal is on file by submitting an Application for Entry form on every animal tested. The animals do not have to be registered, and can be placed on file for performance only. In the event that test results are inconclusive, retesting may be required.

I certify that the blood and/or semen samples are labeled correctly with the tattoo of the animal whose sample is being submitted for testing, and that the membership listed above is submitting the sample(s) for testing and accepts responsibility for any charges.
